WELCOME TO THE ROADLOFT COMMUNITY

Congratulations on your brand new Roadloft kit!

Your choice not only reflects your commitment to nature, but also your desire to fully live each moment.

With your Roadloft kit, passionately designed and prepared by our team, you are ready to explore new horizons and discover the beauty of the world around you.

Inspired by nature

Discover new landscapes, be in contact with nature and travel freely

We are convinced that your Roadloft will inspire you to head out spontaneously and create unforgettable memories in nature, all while respecting it. By joining the [Roadloft community](#), you'll be able to share your experiences, tips, and adventures with other enthusiasts.

May your Roadloft kit lead you to countless nature getaways, filled with wonder and genuine adventures, while also helping to preserve the beauty of our planet!

Now it's up to you, let yourself be inspired by nature!

List of Components

Kitchen

1 kitchen unit

2 connecting pieces, 11 screws, and 11 washers

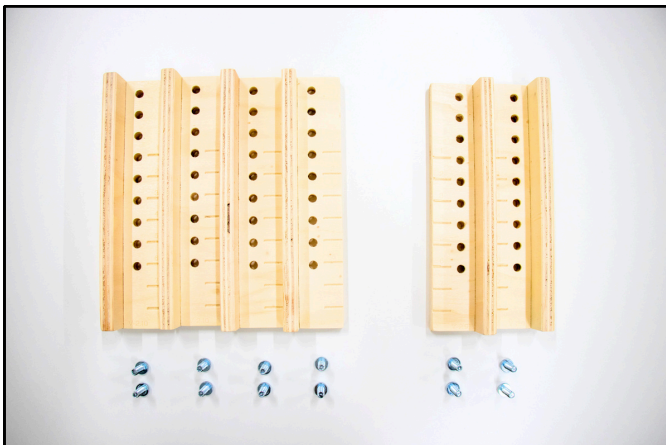

1 small cabinet

1 connecting piece for the small cabinet to the kitchen unit leg

6 cabinet legs, 12 screws

1 central kitchen panel

Bring you into nature, while respecting it

4 vehicle attachment straps

2 connecting attachment straps

The sink shelf, the sink, and the cutting board

Depending on your vehicle model, the sink shelf is either removable or sliding.

List of Necessary Tools

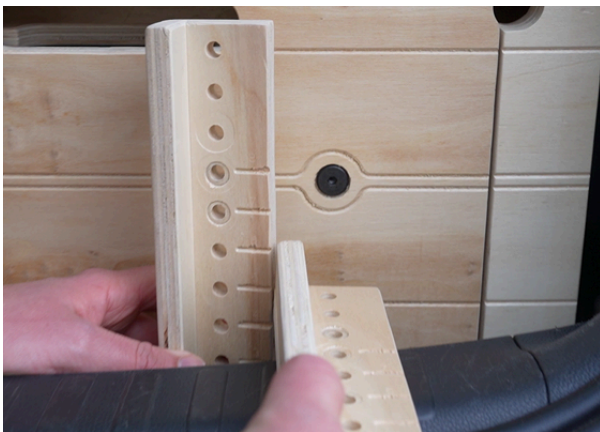

Before you begin, you will need:

- A Phillips screwdriver

Installation Steps for the DUO Camping Kit

1. Lower the rear seats of the vehicle.

2. Check the minimum height required to open the kit by placing a bracket in the deep part of the vehicle, at the edge of the trunk.

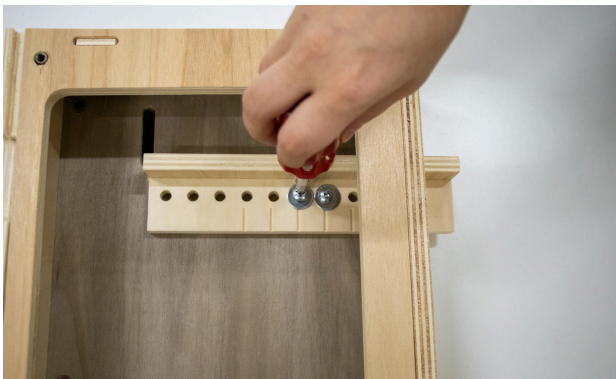

To install the brackets of the kitchen unit, open the drawer so that you can access the two latches on the sides. Press both latches while pulling on the drawer. Then remove the drawer

3. Flip the kitchen unit and the small cabinet onto the floor to see the four slots needed for the legs' installation. Place on a clean blanket to prevent damage

3.1 Using a screwdriver, install and adjust the height of the legs for both the kitchen unit and the small cabinet. Use 2 screws per leg.

3.2 Attach the 6 legs (4 on the kitchen unit, 2 on the small cabinet). Ensure they are securely attached before flipping the kitchen unit back over.

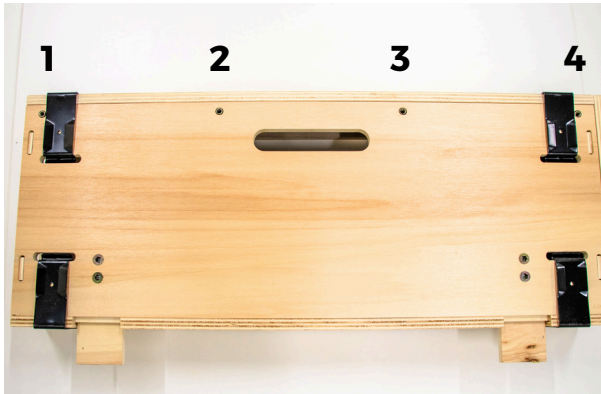

While adjusting your legs, ensure that they all have support in the vehicle and that the kit is level

3.3 Flip the kitchen unit back over, legs facing down.

Reinstall the drawer by aligning the two sliders. Put the drawer back in.

To help you properly reinsert the sliders, hold the sliders of the cabinet and push the drawer. A click should be heard on each side. Resistance is possible when replacing the drawer. However, once completely closed, your drawer will no longer have resistance.

4. Using a screwdriver, secure the 4 vehicle attachment straps. Attach 2 straps outside the small cabinet and 2 straps outside the kitchen unit.

The goal is to create a tension angle to secure the modules in the vehicle.

4.1 Using a screwdriver, attach the two straps to the boxes. One inside the small box and one inside the kitchen box, near the front panels.

5. Using a screwdriver, secure the small cabinet to the connecting piece. For this, place the cabinet face down on a clean blanket to prevent damage.

5.1 Lift the pivot part of the connecting piece, then screw this piece onto the back face of the small cabinet. You will need 4 screws and 4 washers.

Ensure that the small cabinet is securely attached to the connecting piece before installing it in the vehicle.

Vehicle Installation

6. Install the small cabinet and the connecting piece in the vehicle

6.1 Then, install the kitchen unit at the right end of the connecting piece.

6.2 Using a screwdriver, secure the kitchen unit to the connecting piece. You will need 4 screws and 4 washers.

6.3 Fit the 'E' piece under the two front legs of the cabinets, then attach the cabinet attachment straps. (Only SUV)

6.4 Attach the straps to the vehicle's anchors.

Check that the tailgate closes well. If needed, move the conversion kit a few centimeters.

6.5 Tighten the four straps to the vehicle's anchor points. The straps should be angled like the one in the image. This way, both the small cabinet and the kitchen unit will not move and will be secured.

Opening the Drawers

The kitchen unit has a locking system to prevent it from opening while driving. To open it, insert your finger into the hole, press the black plastic piece to the left while pulling the drawer by the handle.

Recommended Use

1. Do not exceed the drawer load capacity (100lbs).
2. When installed in the vehicle, ensure that the kit is properly secured with the straps to hold the module in place.
3. Do not leave your fingers in the hatch openings when opening or closing the drawers.
4. When storing, keep in a dry place and flat.

Warranty
